

AQA drink Pure SLIM

| | | | |
|---|---|----------------------|--------------|
| Model UK | SLIM 2 | | |
| Filter Ø (F) | 1/4 inch | Flow Pressure | 1.7 – 2.7bar |
| Maximum Flow rate | 3 L/min | | |
| Capacity up to | <ul style="list-style-type: none"> - Magnesium resin cartridge 800-1200L(CaCO3 Hardness 9-12 °dH) - High efficiency activated carbon cartridge 4000L(Chlorine@2ppm) | | |
| Maximum Temperature water /surrounding | 30/40 °C | | |
| Dimensions | H405*W167*D110(mm) | | |

Functions of SLIM Cartridges

| Model | Features |
|---|--|
| SLIM-C High Efficiency Activated Carbon | NSF certified 5 micron PP outer layer removes impurities, suspended solids and micro-particles. An additional layer of activated carbon provides efficient removal of harmful pollutants, chemicals, insecticides, chlorine, odors, and heavy metals. At the center, a 1 micron PP filter serves as a final stage of filtration. |
| SLIM-UF Membrane multi-filter | NSF certified filters consisting of membranes ranging 0.1 µm in filtration diameter. The filters effectively remove 99.99% of bacteria and viruses while preserving desirable minerals; ensuring safe and healthy unboiled water. |
| SLIM-MG Magnesium ions exchange resin filter | Magnesium ion exchange filters adsorb limescale, calcium carbonate, and heavy metals. Through the process, magnesium ions are deposited in the water to develop a mildly alkaline nature, allowing for healthier, tastier water. |
